- 3—Log henhouse until 1894.
- 4—Log building where in 1893 I kept my first purebred chickens.

Neubert Poultry Farm

Owned by us and consists of 10 acres, located two miles from Mankato. We have here three large poultry houses, the largest having 5,000 square feet of floor space, being circular, 55 feet in diameter with two stories.

Our business has grown to such an extent that we have connections with a number of other farms. Here a number of flocks are raised and kept, each of them is in charge of an experienced person. By this method we are able to give the fowls more room and better attention.

Hardy Northern Bred

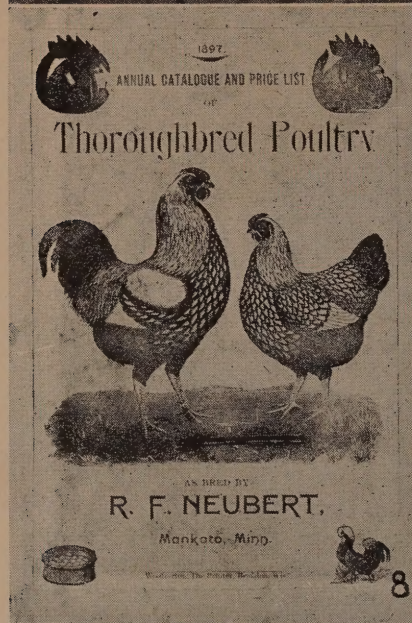

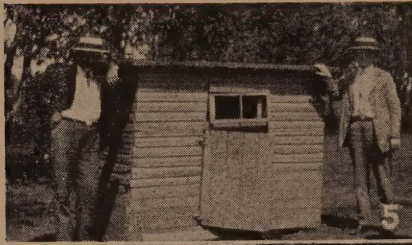

It is of great importance in getting fowls, that they are hardy and vigorous. As our fowls are bred in the North they are more hardy and more active. They are also exceedingly beautiful in plumage. It is generally known that northern raised seeds are far better, not only for the North, but especially for the South. **THIS IS JUST AS TRUE OF POULTRY.**

With our system we can, at all times, supply you with new blood in either eggs, chicks or stock not related to those bought of us before.

Our Prices

The prices quoted are as low as we are able to make them and send you strictly high-class purebred fowls, chicks or eggs. We stake our reputation on the high quality we send out. If you want strictly high quality at a reasonable price, we can surely please you. In ordering, if you have a second or third choice, please give same as this will hasten your order out.

The expense to produce strictly high quality chicks and fowls is much greater than most people believe. We make it a point to produce the best and sell at as low a price as it is possible for us to do.

- 5—Hen coop of 1893.
6—Henhouse built in 1894. Still in use.
7—Poultry yards in 1896.
8—Reproduction of 1897 catalog.

Grown Breeding Stock

We guarantee all fowls to be pure bred, of high quality and to arrive safely at your express office. If fowls are not entirely satisfactory they should be returned at once and we will promptly refund money, less expressage. Fowls shipped safely the year around but by express only. **WE DO NOT SHIP ANY STARTED CHICKS OR HALF GROWN FOWLS NOR ANY GOSLINGS, DUCKLINGS OR POULTS.**

Eggs for Hatching

We pack eggs securely and guarantee safe delivery, making shipment by parcel post, **POSTPAID.** (Canadian orders are shipped by express collect). We do not sell less than a full setting of one variety. If less than half of eggs hatch we agree to duplicate chicken eggs in setting lots at one-half price. Eggs bought at 100 egg prices, also goose, duck and turkey eggs are duplicated at two-thirds regular price.

Order Early

It is very important to send your order in as soon as you get this catalog. Early in the season we have a large assortment of poultry to select from.

Eggs and chicks should also be ordered some time before you want them. We book the orders and ship these at any time you are ready for them.

Terms

Full remittance must accompany all orders. Send money by money order, bank draft, registered letter, or any other convenient or safe way.

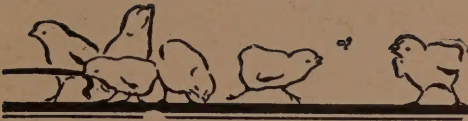

References

As to our reliability and responsibility we refer you to the National Citizens Bank, National Bank of Commerce, American State Bank and First National Bank, and to any business man of Mankato, Minn. where we have been in this business since 1893.

We also refer to the publishers of all leading farm and poultry journals, also to Dun & Bradstreet Commercial Agency.

Location and Shipping Facilities

Mankato is located 85 miles south of St. Paul and Minneapolis and 40 miles north of the Iowa state line. Having four railroads here our shipping accommodations are the very best. We can thus ship promptly by express or parcel post at lowest rates.

Quality Chicks

Neubert's High Quality Chicks

We are especially well equipped to furnish strictly high quality, purebred chicks of leading strains and of the most popular breeds.

The best is the cheapest and therefore do not wish to compete in price with firms that offer any kind of chicks, often not even purebred. We own and operate one of the largest purebred poultry and hatchery businesses in the northwest and from our 52 years of actual experience with purebred fowls know how important it is to get the very best quality chicks.

Our chicks are vigorous, hardy and healthy and are produced from special selected, blood-tested, heavy laying and strictly purebred fowls.

Safe Arrival Guaranteed

We ship safely by PARCEL POST in special constructed boxes and guarantee 100% live delivery of the number ordered. Can ship chicks to every state of the union EXCEPT Washington, Oregon, California, Idaho, Utah, Arizona and Nevada.

Please count the live chicks on arrival. If fewer are alive than the number ordered, please have postal employee or two witnesses sign a statement to that effect and mail to us AT ONCE.

Please give second and third choice whenever possible. Send in your order early.

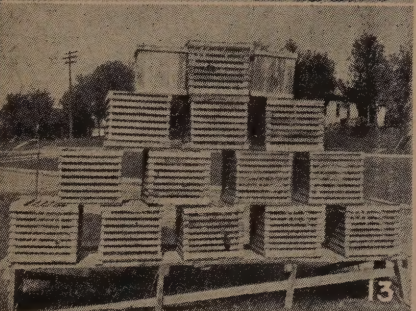

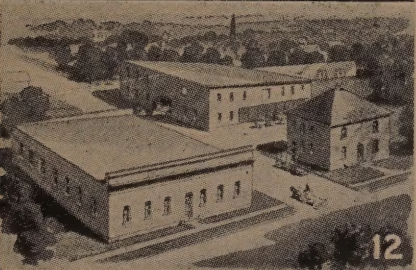

No less than 25 chicks sold of any variety.

Please send remittance in full with all baby chick orders. This saves extra bookkeeping and hastens shipment. Your order will be booked for delivery any date you wish. Under these terms we pay all transportation charges, making shipment by mail, postpaid. No C.O.D. shipments.

We can furnish chicks every month of the year but only of the varieties which you will find listed on the colored chick price list attached in the center of this catalog.

Assorted Baby Chicks

Assorted chicks are those that are left over after our regular orders are filled. Only strong and lively chicks are shipped. No culls or cripples are ever included. Assorted chicks are sold with the understanding that we select the breed, or breeds. See price list.

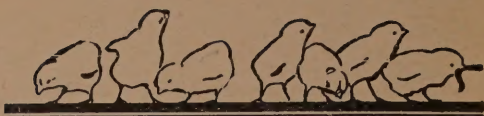

9—Poultry exhibit at the fair.

10—Our office building 1896-1898.

11—Neubert Poultry Farm in 1901.

12—Plant and office in 1908.

13—Sixty-four fowls going to Spain.

NEUBERT'S SEXED CHICKS

..... *Make You Big Profits*

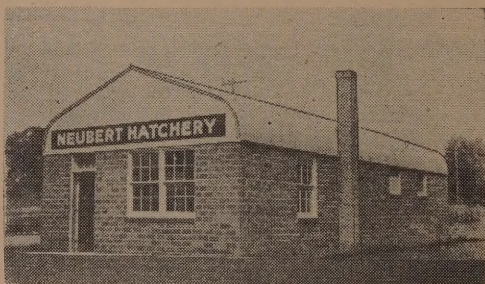

Sexed chicks are chicks that have been separated by sexes, that is, the pullets have been separated from the cockerels when they are day old. Our chicks are sexed only by trained experts which means chicks are unharmed and sexed with high degree of accuracy.

Pullet Chicks

Buy sexed pullet chicks and plan for a bigger egg harvest this coming fall and winter. Sexed pullet chicks offer a sure "short-cut" to more pullets in your laying house with half the feed and trouble and no increase in your present brooding equipment. It has been proven by leading poultrymen that where sexes are separated the chicks make a more rapid and uniform growth. Eliminate crowding and cut down disease. If you have never raised any sexed day-old pullet chicks, try it this year and we are sure you will be well satisfied with results.

Cockerel Chicks

Cockerel chicks offer these advantages: The first cost is very low. Increased vitality. You can crowd them to broiler size more rapidly and feed more effectively as you can give the males a broiler ration all the way through to 2 or 3 pounds' weight. One can dress out light breed broilers at a good price. Cockerels develop at a more uniform rate if raised by themselves. Cockerel chicks offer the ideal way of securing males for your breeding flocks and we suggest the purchase of our better grade.

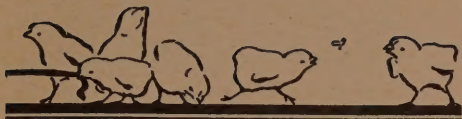

14—The old home farm as it is today.

Here it is where we started in the purebred poultry business in 1893.

15—Partial view today of our main hatchery at Mankato.

16, 17, and 18—Three of our branch hatcheries at other points.

Quality Chicks

OUR HATCHERY FLOCK BREEDING PROGRAM

Pure-bred, heavy laying, blood-tested Parent Stock

Herewith we explain our own culling and breeding program that we have been carrying on for years. Each and every bird has been personally culled and handled by recognized poultry experts who are licensed by the Minnesota Poultry Improvement Board. In order to obtain a State license as a Poultry Flock Inspector, and culler, one must pass a most rigid examination. In culling and inspecting our flocks we are guided by the Standard of Perfection, the recognized authority of the American Poultry Association, of which we are a life member.

Only such birds that come up to standard in size, type, weight, egg production, color and markings of plumage, health and vigor are allowed in our flocks.

Our Culling and Breeding Program Means

1. All fowls must be vigorous and healthy, absolutely free of disease.
2. All females must be of good egg producing qualities.
3. All males must be outstanding individuals of their breed.
4. All fowls **MUST** conform to the American Standard of Perfection. They must be true to breed, type and color.
5. All fowls must be free from disqualification.
6. All fowls must be properly housed and fed and kept in a sanitary condition.

All Breeding Flocks Blood Tested

In addition to our hatchery culling and breeding program, we blood test all our hatchery flocks for Pullorum disease (Bacillary White Diarrhea) by our own competent testers, using the whole blood antigen method. All reactors are promptly removed from premises. We firmly believe that blood testing the parent stock is the one best way of eradicating trouble in chick raising and is of greatest help to everyone in the poultry business.

BLOOD TESTING

- | | |
|-------------------------------|------------------------------|
| 1. Raises Chick Livability | 3. Increases Egg Production. |
| 2. Prevents Grief from Losses | 4. Improves Hatchability |

DEVELOPED INTO EXHIBITION BIRDS

Spooner, Wis.—Last spring I purchased 100 Black Jersey Giant chicks AAA grade of you and they are fine, and many of the 100 developed into even exhibition birds.
C. FOSGATE.

PRAISE LIVING, LAYING, BEAUTY

Slaton, Texas—The Anconas I received in February are laying fine. I got my first egg when they were 4 months and 2 days old. Several poultrymen have seen my flock and have certainly praised them highly. I have my eggs spoken for by 2 hatcheries for another year. I can certainly praise your chicks to anyone for living, laying and beauty so what else could a poultryman wish for.
J. H. LAMBRIGHT.

Neubert's

Two Grades of Neubert's Quality Chicks

Neubert's Superior Quality Grade AAA Chicks

Our Superior quality flocks are made up of our heaviest laying hens, the very best of our best. We will match them against any for beauty and egg production combined. They are of top-notch quality and we recommend them to our customers who want something extra good and are willing to pay a little more. This type of chick costs more to produce but the extra quality is well worth it. These flocks are culled for heavy egg production and quick growth, as well as for market and exhibition qualities.

Our Superior Quality Grade AAA are all hand selected. Only the largest, strongest and healthiest chicks are sent out under this grade, which give promise to grow fast and mature into the most satisfactory and profitable fowls. We believe it is advisable to pay the small difference and get our best, or Superior Quality Chicks.

Neubert's Standard Quality Grade AA Chicks

Our Standard quality grade is composed of some wonderful flocks. Big sized and strong, the chicks develop quickly into heavy layers and money makers. They represent the utmost in quality at a most reasonable price. They are so far above the average farm flocks in quality that there is no comparison and they are excelled only by our Superior quality chicks. The price is very moderate, quality considered, so please place your order early.

For latest prices see attached colored price list.

NEUBERT CHICKS *are Expertly Sexed!*

Quality Chicks

GET *Egg-Bred* CHICKS from NEUBERT'S

The baby chicks you buy this spring must develop into a flock of profitable layers next fall and winter or your investment has gained you little. There's one way to make sure your baby chick investment will return a profit—buy Neubert's Egg-Bred chicks. Long years of experience in breeding and hatching plus up-to-the-minute equipment enables us to provide quality chicks in which there is no guess work. When you buy Neubert's Egg-Bred chicks, you **KNOW** you are getting proven, sturdy, healthy birds that will make money for you.

NEUBERT'S HYBRID CHICKS

Hybrids are sweeping the country. No wonder. Leading colleges and poultry stations through accurate tests have proved that Hybrids have a natural vigor that not only decreases chick and pullet losses, but also increases egg-production. Others say Hybrids grow bigger, range and forage better, make wonderful fries, roasters, capons, and meat birds as well as marvelous layers.

Cross-breeding two purebred strains produces hybrid offspring superior to either parent. That fact is no secret. Every day we read about the advantages of hybrid corn.

Red-Rock Hybrids

R. I. Red males crossed with Barred Rock females. Pullets lay large brown eggs, producing better than hens of either breed. Cockerels look like Barred Rocks, with fine yellow skin and shanks.

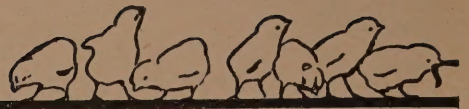

Austra-White Hybrids

Australorp males crossed with high egg-producing White Leghorn females. Austra-Whites are really a "double egg-producing" hybrid because the parents on both sides show heavy egg production, fast growth and good body weight. Pullets are white with a few black splashes over the back. They have a yellow skin with dark shanks. The comb is smaller than the Leghorn, and the body shape is more like a Minorca as they are heavier and deeper in body than Leghorns. They weigh five pounds as pullets and six pounds as hens.

Rare Breed Chicks Assorted

In hatching so many different kinds of rare breeds of poultry we usually have a few chicks of each kind left over from each hatch. All are strong, healthy chicks; all are Rare Breeds. We cannot guarantee any certain breed or number, but if you will let us know what breeds you want we will try to fill your order as close to the way you want it as possible. These assortments are made up of Cornish Indian Games, Black Astralorps, Silver Laced and Columbian Wyandottes, Blue Andalusians, White Giants, Black Giants, Buff Minorcas, White Minorcas, Light Brahmas, Partridge Rocks, etc. We guarantee at least four different, unusual breeds in each order. **SEE PRICE LIST.**

All our Rare Breed flocks are of genuine show quality. Why not try a few of these chicks and raise some prize winners for your local poultry show or fair next fall? These assortments are shipped during March, April, May and June **ONLY.**

**OUR CHICKS WILL PUT MONEY
IN THE BANK FOR YOU.**

Egg-Bred Stock Necessary for Real Profits

Many make the mistake of buying chicks of common breeding, and are disappointed. They experience heavy losses . . . poor growth . . . late maturity and low egg-production. Chickens, like any other livestock, must be properly bred to produce worthwhile profits. A chick inherits the qualities of its parents. If they are strong and healthy, their chicks are vigorous and alive. They utilize their food better, and grow fast. They mature at an early age and start to lay a month or two earlier than common strains. And if they lay early, they have the natural laying habit bred in them and produce a high average for the year. They lay in the fall and winter when prices are highest. They are money-makers because they are bred that way.

Our Breeding Program

Years ago, when we first established a hatchery, we determined from experience on the farm to develop breeding stock that would produce more cash income . . . a bigger profit for our customers than the chicks produced by the average hatchery. We started a definite program of flock improvement and by careful selection of new high-production bloodlines, have now developed a health and egg-production standard far above that of the average chick hatchery.

Dubuque, Iowa—At our poultry show last week I entered a Silver Spangled Hamburg cockerel and pullet of the baby chicks I bought of you the latter part of last May, and drew first prize on both.
MRS. JESSIE BRAUN.

Warrenton, Texas — We received our chicks in A-1 condition, and have raised every one of them. MRS. GEO. ILSE.

**Strong, Husky,
Healthy Chicks**

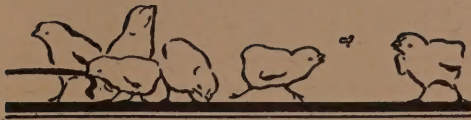

If you are to realize the best profits from your baby chicks they must arrive at your farm strong and healthy, ready to go to work under your feeding program. That's the kind of chicks you get when you order from Neubert's.

WELL PLEASED; ALL LIVELY

Cofeyville, Kansas—I received the 100 chicks this morning and am more than well pleased with them. They are a lively set of chicks.
W. H. LAPE.

WELL PLEASED, PROMPT IN SHIPPING

Warren, R. I.—Received the chicks all alive, very lively and am well pleased. Thanks for being so prompt in shipping them.
FRANK SOARES.

Quality Chicks

NEUBERT GIVES YOU *Egg-Bred* QUALITY

BABY chicks you buy this spring will be only as good as the firm from which you buy them. That's why we want to tell you, through the pages of this catalog, just why Neubert's is a firm in which you can place unqualified confidence. We have been doing business for 52 years and that means thousands of farmers who have been raising Neubert's chicks have been satisfied and have come back year after year. We have been rigid in holding to high standards in our breeding program, have constantly added proven blood to our own flocks, have blood-tested with extreme care and have insisted on strictest sanitation measures on our farms and in our hatcheries.

NEVER SAW NICER CHICKS

Youngstown, Ohio—My chicks all arrived in first class shape and best of health and they sure are doing fine—not one dead. Neighbors and myself never saw nicer chicks than they are. I am sure pleased. From now on I shall buy chicks from Neubert Quality.
WILLIAM KUBOSKO.

I'M FOR NEUBERT'S CHICKS

Taylor, Pa.—Received baby chicks. They all looked in perfect condition. None were hurt or dead. I'm for Neubert chicks from now on.
STANLEY WYTOVICH.

WILL SEND US ALL ORDERS

Tunnell Hill, Ga.—I received the chicks O. K. They are all alive and doing fine. I shall order all my chickens and eggs from you only. I recommended your company to my neighbors.
Mrs. K. Bruce.

SURPRISE PEOPLE OVER CHICKS

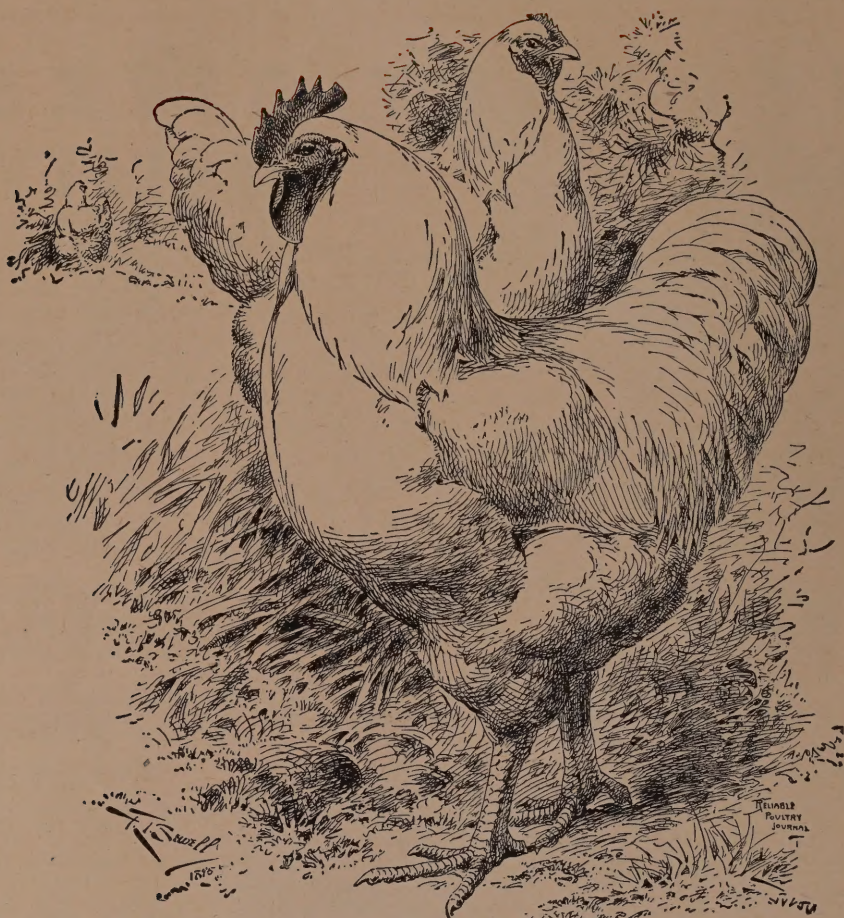

Dayton, Ohio—I received my baby chicks in good condition. They were a surprise to the people around here because they came so far and all of them arrived alive.
Dallas Schackelford.

WILL SEND ONLY TO NEUBERT

Merna, Neb. — We received the chickens O. K. and they are sure dandy. We would not send any place but Neubert again. They are the nicest birds I have ever seen for some time.
Mrs. E. E. Farnham.

Neubert's Chicks Will Surely Please You

WHITE PLYMOUTH ROCKS

Excepting in plumage, the White Plymouth Rocks are an exact counterpart of the Barred variety, from which they originated. As a general purpose fowl they rank with the best. They are good egg producers and as winter layers they are unsurpassed; their eggs are large in size and of the best quality. As a market fowl and for table purposes, White Plymouth Rocks stand among the best; the rich yellow skin covering a plump, meaty body makes them very attractive, the flesh is fine, white, tender and richly flavored. The chicks are hardy and vigorous, and mature young. Add to these qualities the fact that they are very handsome and pleasing in appearance, there seems little else to be desired. Their weight is about the same as that of their Barred cousins. Our stock of this variety is of high quality, fine in plumage and standard in shape and size.

For Prices on Fowls, Eggs and Chicks see Enclosed Colored Price List.

Baton Rouge, La.—I received the Rock baby chicks. All of them were living and in the best condition. From now on I shall buy Neubert's Quality chicks.

ROYDAN BOZEMAN.

Barre, Vt.—Received the Barred Rock chicks and am more than pleased with them.

MRS. JAMES SLORA JR.

BARRED PLYMOUTH ROCKS

The Barred Plymouth Rocks, whether bred by the fancier or farmer, are still acknowledged to stand at the head of all the breeds as general purpose fowls. They have stood the test for many years and yet retain their original popularity. They mature early, are of good size, hardy and easy to raise, making them very desirable for broilers and roasters; having clean yellow legs, beautiful blue-barred plumage, are prolific layers, and they fatten very readily. The reputation of the Plymouth Rocks as "all around good fowls" is firmly established and will remain so for many years to come. Standard weight: cocks $9\frac{1}{2}$, hens $7\frac{1}{2}$, cockerels 8, pullets, 6 pounds.

We are especially strong in this breed, better birds than our Barred Plymouth Rocks are hard indeed to breed. Our birds are of very good shape and size, are very evenly barred, good in color of eyes, rich yellow legs and bills, and well shaped combs.

Partridge Plymouth Rocks have the beautiful rich partridge color and markings as the Brown Leghorns or Partridge Cochins. They are hardy, strong and vigorous. Have the true Rock shape so popular everywhere, yellow legs and quick maturing. They are a perfect combination of rapid growth, great laying qualities and large size, together with great beauty. Standard weights same as the Barred. Our stock is of very high quality.

Buff Plymouth Rocks are indeed a most beautiful variety. They are of the same weight, style and shape as their Barred cousins. Great layers and first class market fowls.

For prices on Fowls, Eggs and Chicks see Enclosed Colored Price List

WHITE WYANDOTTES

In all their characteristics these are about the same as the Laced varieties, except in color, which is pure white. As egg producers they are among the very best. We have bred our strain of this variety up to the general standard, at the same time paying particular attention to laying qualities, and now we have White Wyandottes that produce eggs during almost the entire year. The White Wyandottes mature very quickly and their full breasted, plump bodies and yellow skin and legs make them a very valuable table and market fowl. Standard weight of all varieties of Wyandottes: cock 8½ pounds, hen 6½ pounds, cockerel 7½ pounds, pullet 5½ pounds. Our birds of this breed have large, well shaped bodies, good combs and eyes, pure red ear lobes, rich yellow legs and bills, and clean white plumage, free of yellow so often found in this breed. They have the blood back of them to produce prize winners, also good market fowls and great egg producers. If you want this kind of stock, give us your order for either fowls, chicks or eggs.

JERSEY BLACK GIANTS

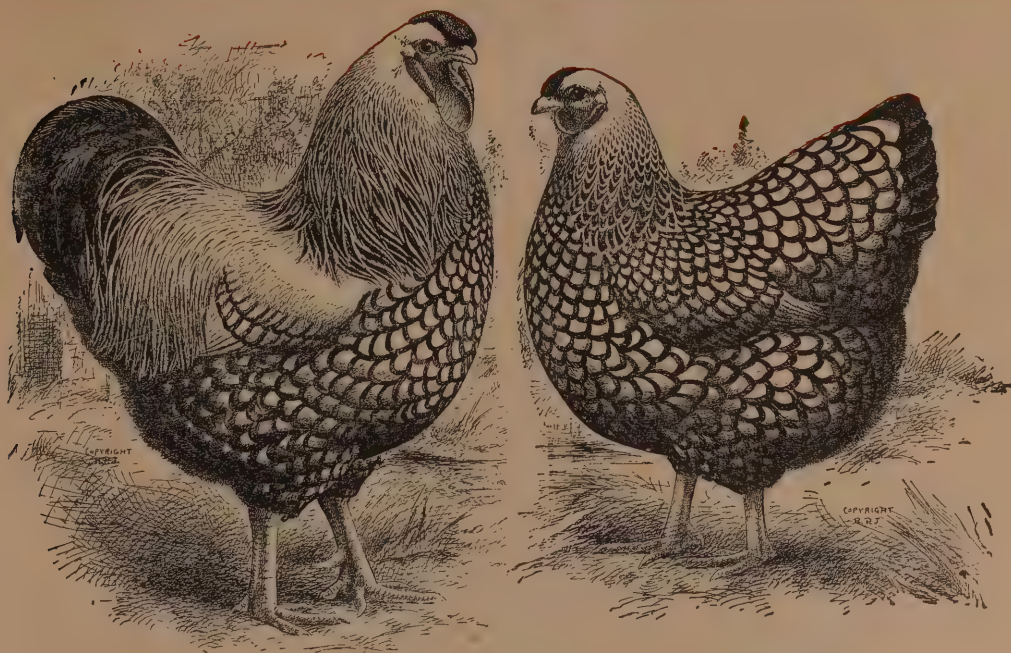

This wonderful breed has proved to be one of the best. They are extra heavy layers of large brown eggs, also in winter. They are extremely hardy, grow fast, mature early, making a fine fowl for table and market. They attain unusually large size and heavy weight but are very active and are a very beautiful fowl. Their jet black plumage with a beautiful green sheen on the surface, light under-color, bright red combs and deep, full bodies present a very pleasing appearance. Standard weights: cock 13, hen 10, cockerel 11, pullet 8 pounds.

JERSEY WHITE GIANTS (See cut on back cover)

A new and Very Valuable Variety. They deserve to be in such high demand as here is a breed that has qualities not excelled by any other breed. They have all the good points of the Black Giants, but having a pure white plumage they show no dark pin feathers when dressed for market. They are the same size as the Black Giants, with dark eyes, dark legs and are wonderful producers of large brown-shelled eggs. Giants attain weights not equalled by any other breed and are very hardy. On account of their large size and white plumage a flock seen in a farm yard is a most beautiful sight.

We have high quality in this breed and feel sure we can please all.

For Prices on Fowls, Eggs and Chicks see Enclosed Colored Price List.

SILVER LACED WYANDOTTES

This beautiful American breed is very popular. A flock of them seen together is indeed a sight to behold. They are beautiful and profitable in the fullest sense of the word. They are like the White Wyandottes in size, laying and market qualities. The only difference is color and markings of plumage.

COLUMBIA WYANDOTTES

The Columbian Wyandotte does not differ, in general utility and usefulness, from any other of the Wyandotte family. They are in color the same as the Light Brahma. (See cut at left).

SILVER GRAY DORKINGS

Silver Gray Dorkings are a very old but very popular and profitable breed. They grow fast, mature early and attain very heavy weights, making them extra good table fowls. Are very good layers and have beautiful plumage.

White Face Black Spanish

The Black Spanish are highly prized as they are most excellent layers of very large white eggs. The plumage is a rich glossy black throughout, their combs and wattles are red, and their white faces and lobes, peculiar to the breed, contrasting with their black plumage, rendering them a most admirable fowl. The Spanish are about the same size as the Minorcas and are good table fowls.

Wilkes-Barre, Pa.—Received 100 chicks today. They are all well and healthy. Not one is out of condition. Thanks to R. F. Neubert company for sending only the highest quality chicks.
S. BRYSAK.

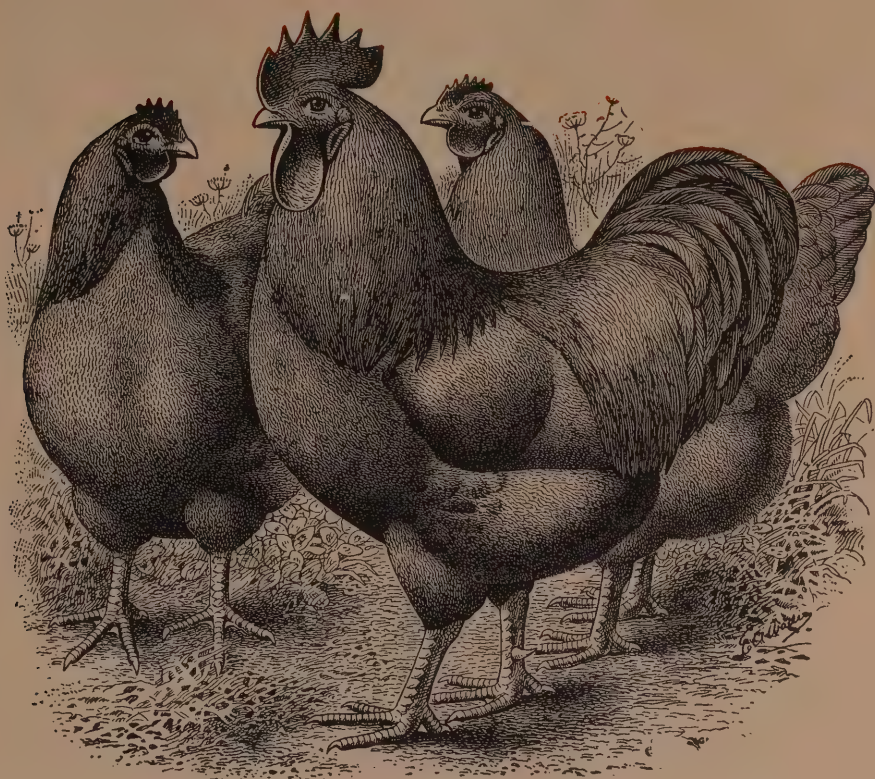

SINGLE COMB RHODE ISLAND REDS

The Rhode Island Red fowl is popularizing itself throughout the world wholly upon its merits, it having some distinctive utility characteristics.

Their qualities are well known and are recognized as an ideal general purpose fowl having great egg laying qualities and the meat and market quantities of the Rocks and Wyandottes. We secured some of the best Rhode Island Reds we could find and after testing them as to their much lauded qualities find them to be a fowl worthy of consideration by any one desiring a first class general purpose fowl. In color the Rhode Island Reds are a deep rich red in all sections except tail, which is black. One-half of the primary and secondary feathers are also black. The wing bows, back, neck and saddle are very rich and glossy. The Rhode Island Reds are very beautiful birds and if you wish handsome fowls they will suit you. If you are looking for real high quality in this breed we can surely please. Standard weights: cock 8½, hen 6½, cockerel 7½, pullet 5½ pounds.

ROSE COMB RHODE ISLAND REDS

The Rose Comb Rhode Island Reds are in every way the same as their Single Comb cousins, except comb. Their combs are low down and frost proof which makes them desirable for the northern climate.

SINGLE COMB BUFF ORPINGTONS

As a general purpose fowl they are among the best, their strong points being that they possess as fine a plumage as has been produced in any Buff variety. It is a matter of record in England that some specimens of this variety have laid as high as 245 and even 250 eggs in a single year, and this makes them a most profitable fowl for the egg producer and the farmer. Their large frames, combined with their readiness to take on flesh quickly make them of practical benefit to the broiler raiser. Standard weights: cock 10 pounds, cockerel $8\frac{1}{2}$ pounds, hen 8 pounds, pullet 7 pounds.

SINGLE COMB WHITE ORPINGTONS

The White Orpington is very similar to the Buff Orpington, except in color. They are a very popular fowl on account of their size, laying qualities, hardiness, and early maturity.

SPECKLED SUSSEX

In London, the largest dressed poultry market in the world, the Sussex leads all other varieties. They have more breast meat for the size of the bird than any other breed. As a general purpose bird we have found them excellent. They are hardy, grow very rapidly, mature quickly and the pullets begin to lay early. They are excellent layers of a brown egg. Under trapnest, three hens have produced an average record of 265 eggs each in 365 days. Standard weight: cock 9 pounds, hen 7 pounds.

LIGHT BRAHMAS

They are today as popular and as highly recommended to the poultry keepers as they were when first introduced. They have stood the test of rivalry and still continue to satisfy the many thousands breeding them. And what is the reason that they are so popular? It is because they are, first, a beautiful fowl; second, a practical one. They are the largest of fowls, cocks weigh 12 pounds and more, hens 10 pounds and more. They are so gentle, handsome and profitable one cannot help but like them. Have a rich yellow skin and yellow legs. Brahmas are very easily confined, adult birds will not fly over a fence three feet high. They are good layers of large brown eggs, laying the greater percentage in the coldest months of the year. Young chicks grow rapidly and are hardy from the shell to maturity.

BLACK AUSTRALORPS

(See cut on back cover)

Of all the new varieties, the Australorps are one of the most popular. They surely deserve their popularity as here is a breed that is in the front rank as a general purpose as well as a beautiful fowl. So great and convincing are their qualities that they were admitted to the American Standard soon after they were imported from Australia where they originated. Australorps are large, stylish birds. Their bright red combs, ear lobes and wattles, glowing against their glossy black plumage form a beautiful contrast. Are very good layers of brown eggs. Are strong and hardy, being well adapted for any climate. They have dark brown eyes and dark slate legs.

"THE PIONEER POULTRYMEN" Dependable Since 1893

(All prices in this folder subject to change without notice.)

BUFF COCHINS

They are elegant fowls, being very large, ranking in size with the Brahmas, are very hardy and are good layers. Their plumage is a beautiful rich buff or golden color. No lover of the beauties of nature can pass a flock of Buff Cochins without admiring them. Standard weight, cock 11, hen 8½, cockerel 9, pullet 7 pounds.

Our stock of this variety has been bred from a long line of prize winners.

Azusa, Calif.—The trio of Buff Cochins arrived in fine condition and I am very pleased with them. They are fine looking birds. I would like you to send me two more females. WM. PEARSON.

Canton, Ohio—My Cochins at the Fair all got first. You will get all my business because you know how to give a fellow a square deal. HARLEY FOGLE.

PARTRIDGE COCHINS

Partridge Cochins are very popular and beautiful. On account of their beautiful markings and color of plumage a flock of this breed are much admired by all who see them. They are large, cocks weighing 9 to 12 pounds, hens 8 to 9 pounds at maturity. They are easy to rear, extremely hardy, have yellow legs and skin. Excellent layers, and their flesh is tender and juicy. They are eminently fitted for either the farmer, fancier, or anyone desiring a large and beautiful fowl, quiet and gentle in disposition and not inclined to roam.

SINGLE COMB MOTTLED ANCONAS

The Ancona is one of the most beautiful fowls in America. They are strong and vigorous birds and as proud in their style as a peacock. They are an excellent table fowl. Their skin is yellow, like that of the Plymouth Rock. They have a single comb the size of the Leghorn's; comb and wattles are bright red, earlobes all white; plumage throughout pure black and white, which makes them very attractive in appearance. In size they are about the same as the Leghorn. They are non-sitters and great egg producers, ranking with the Leghorns, laying a large white egg. Standard weights: Cock 6, hen 4½ pounds. Our fowls are of the choicest selections.

CORNISH INDIAN GAMES

These, also known as Dark Cornish fowls, are one of the most popular varieties. It is a general purpose fowl, having the qualities of a market fowl, i.e., compactness, yellow legs, heavy weight (cocks 9 to 11 pounds, hens 7 to 8½ pounds), from which there is but little waste in dressing and, being a quick grower, they produce a fine broiler in a short time because they have short feathers, the nutriment required to put feathers on other breeds going to flesh, which is more juicy and tender in this breed than in a young turkey. Their breasts are very full. The Indian Game hens are good sitters and mothers, and the chicks are very hardy. In color the fowls are quite pretty, the bright brown shafts and the glossy, green lacing makes a beautiful contrast.

Our birds of this breed are of very high quality, being the selection of leading strains.

NEW HAMPSHIRE REDS

Originated in the rigorous climate of New Hampshire and perfected by skillful New England breeders along the lines of high utility value, these outstanding new fowls are creating a genuine furor in the middle-west. Everywhere they are tried they arouse unusual enthusiasm.

Their proven ability to lay heavily under ordinary conditions, and to produce poultry meat profitably, as well as their rapid growth and vigorous health make them the choice of those who want the most money from their fowls.

**For Prices on Fowls, Eggs and Chicks,
see Enclosed Colored Price List.**

SINGLE COMB BLACK MINORCAS

The Black Minorca is a well established breed, are hardy both as fowls and chicks, easily raised, mature early, and pullets commence laying when very young. They are non-sitters, small eaters, splendid foragers, and very good layers of extra large white eggs. Standard weight for cock 9 pounds, hens 7½ pounds. Our Black Minorcas this year are finer than ever before.

We also have very fine Rose Comb Black Minorcas of which we can furnish eggs and fowls. These are in every way the same as the single comb variety, except shape of comb.

SINGLE COMB BUFF MINORCAS

A new but already very popular variety. They are in size, shape and other respects like the Black or White Minorcas, except in color of plumage which is a very rich golden buff. They are non-sitters and heavy producers of large, white eggs. Our stock is especially strong, hardy and in all other ways of the highest quality, and can please anyone who is looking for something extra good.

SINGLE COMB WHITE MINORCAS

The White Minorcas originated in Spain and are a very old variety. Are similar to the Black in every way with the exception of color, and as many prefer the white chicken, they are very popular. They lay a very large chalk-white egg and are splendid layers; they are larger than the Leghorn family and are a better table fowl, while in egg production, the hens laying from 200 to 250 eggs a year.

For Prices on Fowls, Eggs and Chicks see Enclosed Colored Price List.

Neubert's White Leghorns — *Lay and Pay*

Without a doubt the S. C. White Leghorns are the greatest egg layers on earth. The Leghorn is hardy and easier raised than some of the larger breeds because they are natural hustlers and stand confinement well. Pullets usually commence laying at 4 to 5 months of age. **LEGHORNS PRODUCE EGGS AT A LOWER COST PER DOZEN THAN ANY OTHER BREED.** Government tests showed that on 100 pounds of feed the Leghorns produce 268 eggs, Reds 201, and Rocks 188 eggs. In addition, it is possible to grow a Leghorn cockerel to a two pound broiler faster and on less feed than any other breed.

At the hatchery here many of our chick customers mistake our Leghorn chicks for chicks of a heavier breed, because of their large size and weight. We set nothing but large, uniform eggs produced from large good type carefully culled hens. Our Leghorn eggs will weigh around 24-26 ounces per dozen.

Remember, a pullet that lays only 90 eggs per year only pays for her feed. You do all the work for pleasure of her company. A pullet that lays 250 eggs per year is a money maker and brings in better than \$4.00 for the work and care which you have given her during the year. It will pay you to get chicks that grow into high producing pullets even if these chicks cost you a cent or two more. A few cents spent now can well mean extra dollars profit before the end of next year.

Direct Descendants from Pedigreed Males of World Famous Breeders

What makes Neubert White Leghorns such outstanding bargains is the fact that the females producing the eggs carry a high percentage of high egg record blood developed by years of breeding with males from famous R.O.P. White Leghorn breeders of trap-nested stock. Our very best flocks have been mated to cockerels having dam's records of 220 to over 300 eggs per year. No wonder our Leghorns are so popular, and under proper conditions of feeding, care, and management, they should far outlay ordinary Leghorn flocks.

R. O. P. MALES *from Famous Breeders*

It's nothing new for Neubert to head flocks with R. O. P. males (the chief requirement of the U. S. Certified Grade); we've done that for a number of years. **For this season we again purchased many R.O.P. White Leghorn cockerels from noted breeders.** These cockerels are outstanding and are from dams with records of 220 to over 300 eggs per year. Neubert Leghorns are bred for bigger egg profits!

Hundreds of R. O. P. cockerels like this are used in producing Neubert Chicks.

SINGLE COMB WHITE LEGHORNS

Large English Type

This grand and noble breed is without a doubt the most popular in America and they highly deserve it. They are acknowledged to be the greatest egg producers of all breeds, the unrivaled champions of the egg basket. They are like a machine that turns their feed into nice, good sized, white shelled eggs and are justly called egg machines. They are non-sitters, their eggs running high in fertility and hatching remarkably strong chicks. The chicks grow like "bad weeds," feather out very rapidly, very often being in full feather at the age of four weeks. The pullets commence laying at a very early age, and lay incessantly. The Leghorn varieties are easiest of all breeds to raise and if you have not been successful in raising a large number of fowls, this variety will not disappoint you. They are excellent foragers, eat but little and are capable of seeking a fine livelihood while some other varieties would starve to death under the same conditions. White Leghorns show greater beauty when seen on a green lawn than any other breed, owing to their graceful symmetry, pure white plumage, large red combs and gills, and snow-white earlobes. We have selected the very finest birds of this variety from very choice flocks. We can furnish high quality fowls, baby chicks and eggs therefrom.

SINGLE COMB BUFF LEGHORNS

The Buff Leghorns are like their cousins, immense layers of large white eggs. Are noted as early layers. We had pullets which commenced laying when 3½ months old. They have the same characteristics of the Leghorn family. In color, as their name implies, their plumage is solid buff, comb, wattles and a face of bright red; beak and legs a rich yellow. This combination makes a very beautiful fowl. This season we have unusually large flocks of Buff Leghorns of the very best quality.

SINGLE COMB BROWN LEGHORNS

The Brown Leghorns are one of the most popular breeds in America. As layers they lead all others, their ability to turn food into eggs is indeed marvelous. Being a non-sitting breed, no time is lost in hatching and rearing broods. With proper care and housing they also make the best of winter layers. As to appearance a more handsome flock of fowls is hard to find. Their large bright red combs and wattles, pure white earlobes, clean yellow legs, bay eyes, together with their beautiful plumage and proud carriage, make them admired by all who see them. They are active, vigorous, hardy, and bear confinement well. Leghorns are small feeders; if range is given them they will do well with little or no feed. Chicks are easily raised; they grow and feather out the quickest of any breed; pullets often begin laying when but four or five months old. If you want a breed that combines beauty and usefulness give our Brown Leghorns a trial. At maturity males weigh 5 to 6 pounds, females 4 to 5 pounds. Our Brown Leghorns are the cream of several large flocks, only the choicest specimens having been reserved for our breeding yards.

ROSE COMB BROWN LEGHORNS

The Rose and Single Comb Leghorns are exactly alike in every respect, except in the comb. The low compact rose combs are not so easily frozen and are a decided advantage in our climate. They are of medium size, have beautiful gay plumage, white earlobes and yellow legs, are symmetrical in form and very active and pleasing in appearance, are very hardy and chicks are easily raised. They are great foragers and in the summer require little feed. They mature quickly, and pullets lay at an early age. For quality, our stock is hard to beat.

SILVER SPANGLED HAMBURG

Silver Spangled Hamburgs are one of the most beautiful varieties of poultry. Too much cannot be said in praise of this most beautiful breed. The above engraving will give one who has never seen these lovely birds a good idea of their attractiveness. The most indifferent person to the beauties of the feathered race could not pass a flock of Hamburgs without a glance of admiration. They are also, without doubt, one of the greatest egg producing breeds ever introduced into this country. They are non-sitters and will bear confinement well. They lay medium sized white eggs. For laying qualities and beauty they stand on their own merits. Hens weigh from 3 to 4½, cocks 4 to 5½ pounds.

WHITE CRESTED BLACK POLISH

These are a very old variety, belonging to the non-sitting class of fowls. They are more especially bred for fancy than anything else, are very pretty with their large white crests. Aside from their crests, they are black throughout. They are splendid layers of eggs medium in size. They bear confinement well. For a fancy fowl in town, city or country, to keep close around the place or yard, they are very pretty and ornamental. In size they are about the same as the Leghorn. We have bred them many years and find them to give the best of satisfaction. No chicks for sale.

Warwick, N. Y.—Received Hamburg and Brahma chicks all in A-1 condition and I am very well pleased with them. I was surprised that they came such a long distance and arrived in such good shape.

WALLACE QUACKENBUSH.

SILVER CAMPINES

The Campines originated in Belgium and the improved Campines are a cross between the Belgian Campines and the Belgian Braekel which is a larger bird with similar markings. Although a practically new breed in this country they are already very popular. They are non-sitters and lay a large white egg. Are very attractive in appearance; body barred and neck white, carrying large single comb. They are light feeders, hardy, and very good layers. Our birds of this variety are of splendid quality and will surely please.

ENGLISH RED CAPS

Red Caps are known as the great English layers. Indeed, they are great layers and being non-sitters, it is little wonder that they are in such great demand. Face, comb, wattles and ear lobes are bright red; breast dark, purplish black in the cock, rich nut brown speckled in the hen, wing-bows deep rich nut brown, with feathers tipped with bluish black spangles. In the hen the back is of a rich brown with large feather with bluish-black spangles. The legs are leaden blue. They are a handsome variety and anyone who breeds them rarely ever forsakes them, if he begins with birds of the right stamp. The hen weighs from 5 to 6 pounds and the cock from 6 to 7½ pounds. No chicks of this breed for sale.

Winston-Salem, N. C.—I am well pleased with the English Red Caps I ordered from you. I have never had chickens to lay as well as they have. A. T. PARSONS.

Brookfield, Ill.—Received the Cornish Games in perfect shape and have never seen anything so marvelously strong and healthy. R. C. SLANGENHOUP.

Brookford, N. C.—Received chicks today, all alive. Am very much pleased with them. MRS. VIOLA BRADSHAW.

Bayside, L. I., N. Y.—I received the chicks and they were very peppy and nice and strong. I like your chicks very much. JOSEPH KOKAKOSKI.

Elkhart, Ind.—Received my 100 Brown Leghorns all in first class shape. They are one sweet brood of chicks. ARTHUR N. ROWE.

Lowell, Ohio—My Light Brahma biddies came yesterday—all living and fine looking chicks. I am so pleased with them. Will order more next year for they are the nicest I've seen. MRS. GEORGE H. MORRIS.

HOUDANS

The Houdan was introduced from France and is a very old breed. Since being imported into this country it has won many friends on account of its excellent qualities. The fowls are extremely tame, will not roam away, are not high flyers and make fine pets, being well adapted to small runs. They have five toes; crests and beards are dark colored with white spots. They are considered valuable as table fowls, the meat being tender, juicy and finely flavored. They are non-sitters and hardy. The Houdan hen is a good layer of large white eggs. Our stock of Houdan is bred to a high standard and will surely please. No chicks for sale.

LAKENVELDERS

A highly popular and profitable breed. You will notice that the shape and make-up of this breed is similar to the Hamburgs and Leghorns. They are strictly good layers. In color these birds are very attractive and show up fine on a green lawn. They are good foragers and are very active. They belong to the non-sitting varieties. This bird is comparatively new in this country, yet has been bred for some time with good success. No chicks of this breed for sale.

BLUE ANDALUSIANS

This variety is one of the prettiest of the feathered race. Their plumage has a light and dark blue color. Although an old breed, dating back over 50 years, when they were brought from Andalusia, Spain, they were little known in America. They are non-sitters, very good layers of large, white eggs. They grow fast and mature early; are stylish and command the admiration of all who see them. Cocks weigh up to 6 lbs., hens up to 5.

GOLDEN SEABRIGHT BANTAMS

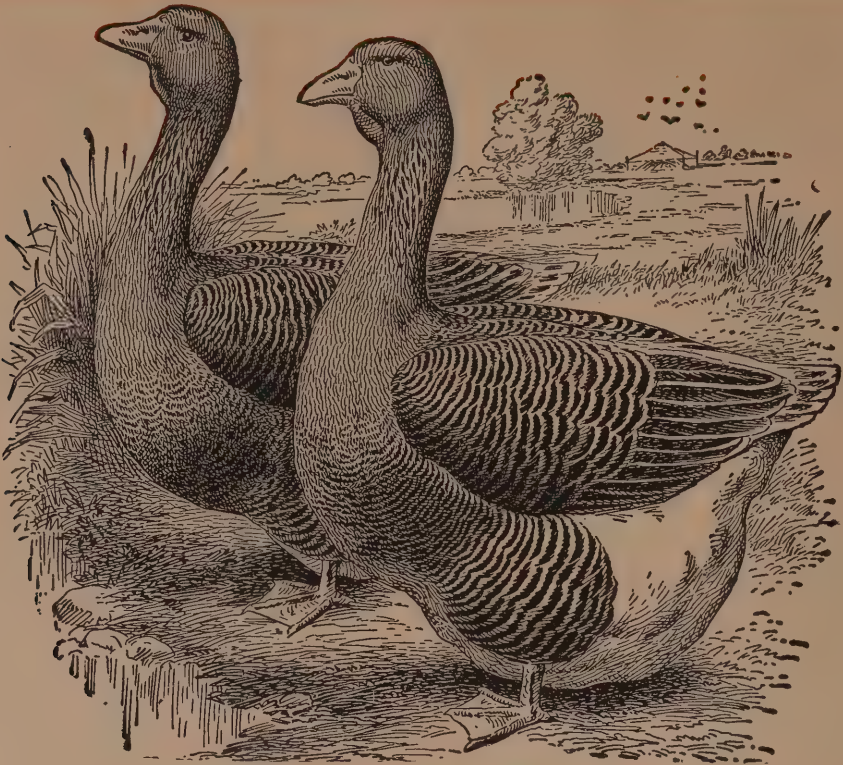

The most handsome of all Bantams. Very popular, good layers, sitters and very hardy.

Bethalto, Ill.—I received the little pair of Golden Seabright bantams in fine shape and are the finest penciled little birds I ever saw. They sure are prize winners. I am an old customer of yours and have always been well pleased with your stock.

WALTER JANSSEN.

For Prices on fowls and Eggs, see Enclosed Colored Price List.

MAMMOTH TOULOUSE GESE

The Toulouse geese originated in the southern part of France. They are the largest and most popular of the goose tribe. They weigh, when fully matured and fattened, 35 to 50 pounds per pair. These geese lay 30 to 40 eggs each, in a season, and seldom want to sit. They begin laying early in March and parties wishing to get eggs should send in their orders early. We find them good to hatch, easy to raise and much stronger when young than common goslings. They grow so rapidly that at five weeks they can be brought to weigh 6 to 8 pounds each, and at 4-6 months, 15 to 18 pounds. Goose raising is very profitable as they need little or no grain in the summer, when they can have plenty of grass to feed on, and are small feeders in winter. Being heavy they can easily be kept within desired limits. Their bodies are very plump and massive; when fattened, their bellies touch the ground. It pays well to raise the large Mammoth Toulouse geese. They attain a weight of 6 to 10 pounds above the common geese and at present prices mean an extra profit of \$1.20 to \$2.00 per goose in the fall when sold on the market. We make the water fowls a specialty and believe that our Toulouse geese are not excelled by any breeder in the country. No goslings for sale of any breed of geese.

For Prices on Fowls and Eggs see Enclosed Colored Price List.

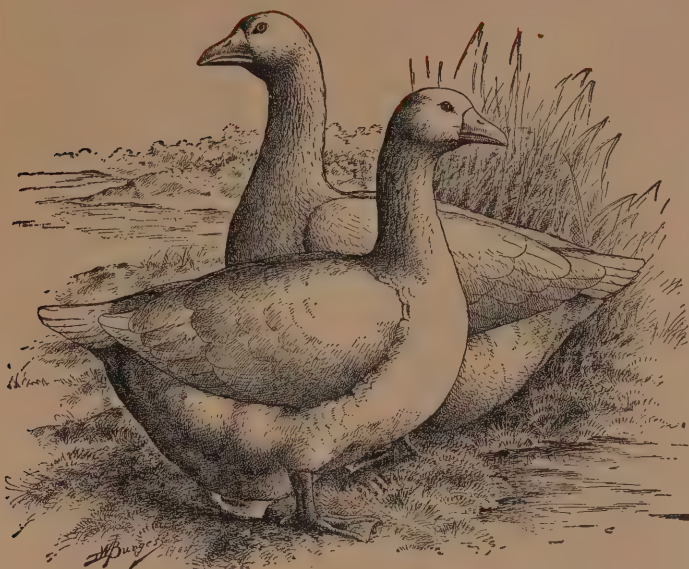

Weaverville, N. C.—Received gander. He is the finest gander in this part of the country and we are well pleased with him. His cost and express and mail order was \$7.32 but three times that amount would not buy him back. We sure thank you for such a fine choice and prompt shipment.
E. M. CODY.

Keno, Ore.—The nice pair of Toulouse geese arrived promptly and in fine condition. They are surely "Blue Bloods." The hen began laying the second day. They'll look very fine feeding on my green river bank. Many thanks for your careful selection.
ETHEL E. PUCKETT.

Greenwood, Miss.—The pair of Toulouse Geese that we got from you are certainly fine birds. We are very proud of them.
E. B. PENTECOSTE.

Tickfow, La.—The Toulouse gander arrived O. K. Stood long trip fine. Everyone that sees him is carried away with him. My wife would not take ten times what he cost us for him if she did not know we could get another just like him.
A. J. SMITH.

EMBDEN GEES

Embden geese are the largest white geese in existence, are very hardy, mature early and are good layers. Embden geese have pure white plumage, prominent blue eyes, flesh-colored beaks and bright orange legs. They are very hardy and well adapted to any climate. In size they are not quite so large as the Toulouse. Matured specimens in good condition weigh 36 to 40 pounds per pair, over-fattened specimens sometimes weigh 50 pounds. Geese are very profitable, especially if you have plenty of grass for them to live on. After goslings attain the age of about two weeks

they will help themselves to grass and seldom care for anything but water. Geese eggs can be set under hens, or in incubators, with as good results as under geese.

West Allis, Wis.—Received the trio of Embden geese in good condition. They sure are very wonderful looking geese. Thanks for your selection. W. C. HOPKINS.

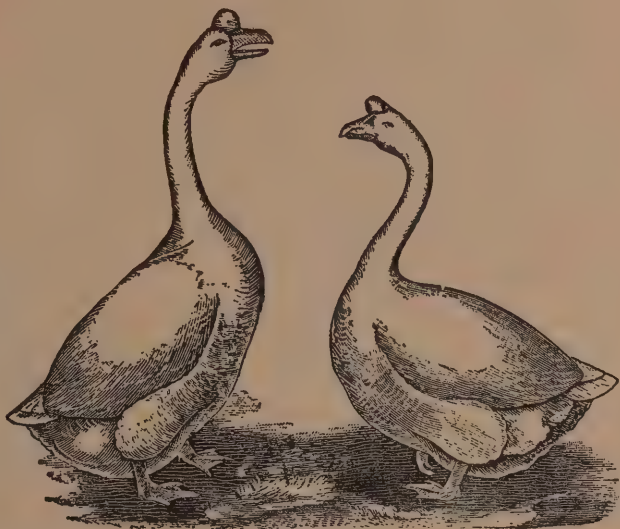

WHITE CHINA GEES

These are the native geese of China, from which country they have been imported. Are very handsome and stylish in appearance. They have a large knob over the bill like the Africans and have a swanlike form. They are exceedingly hardy; the goslings grow very fast and get their growth quicker than other geese. Matured birds, in good flesh, weigh 12 to 16 pounds each, and they often lay 50 eggs in a season, are good sitters and mothers. For table they are very fine.

Havre, Mont.—We have been buying Toulouse geese from you during the last 18 years and we always got satisfaction out of our deals. G. H. FRIESEN.

Allouez, Mich.—Received my geese in good condition. To me they look to be the best pair I ever saw and I have seen a lot of them.

MRS. JAS. NORDSTROM.

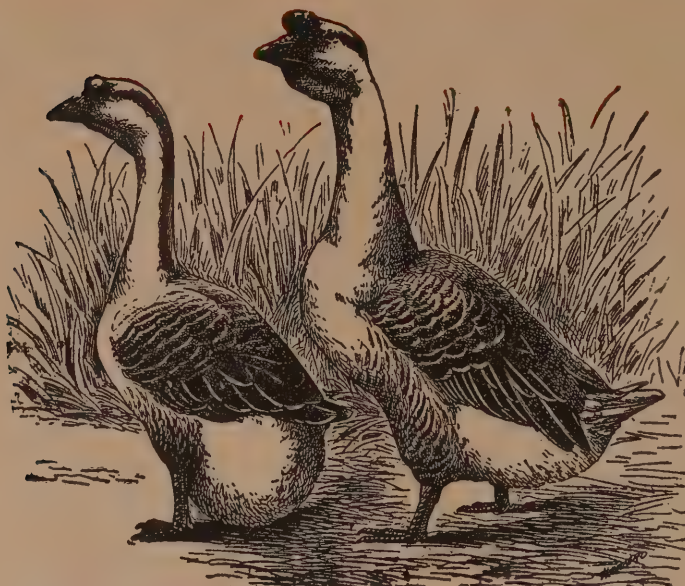

Brown China Geese Are in every way the same as the White China except in color and markings of plumage, which is very similar to the plumage of the Gray African geese.

Buff Geese Very ornamental, having a rich buff plumage. Are of large size, weighing 35 to 40 pounds per pair when matured. They resemble the Embdens in size and shape. Are good layers, grow fast and mature early, making them first class geese for the market and table. This year we have a large flock of very choice birds.

Fergus Falls, Minn.—I received my pair of Buff geese in fine condition. They are the most beautiful Buff geese I ever saw. Thank you for your excellent selection and prompt shipment. ROY J. LOTHER.

Neillsville, Wis.—Received the trio of Mammoth Toulouse geese. They are sure fine birds, larger than we expected. MR. AND MRS. HOWARD BREMER.

GRAY AFRICAN GEESSE

This breed has been raised for many years and have a good reputation as a first-class market goose. Africans have a steady, dignified and noble walk and carriage, and have much grace in their movements. These geese have a large head with a large black knob. Their backs are long and flat, breast round and moderately full and they have large, long and upright bodies. Are good layers, sitters and mothers. Their plumage of the neck is light gray, with a dark stripe running from the head to the body. The back is dark gray, the breast is gray and the under part of the body is light gray; wings and tail are dark gray. The eyes are hazel brown, bill black, shanks,

toes and web are of dark orange color. The standard weight of the adult gander is 20 pounds, adult goose 18 pounds.

Baldwin, N. Y.—The geese arrived in excellent condition. They are very beautiful birds and my daughter is more than satisfied.

MRS. E. SOLLER.

Madison, Miss.—I received the geese. The young African gander is a fine bird. I have never seen anything to compare with the 3 Toulouse geese. The two old birds are the largest geese I have ever seen, and everyone has said that they did not know that such birds existed. They are the most massive birds I have ever seen.

JACK M. GREAVES.

MAMMOTH PEKIN DUCKS

Are the largest, most popular and profitable of any breed. This is the breed used by the large market duck raisers. They are large, mature very early and are great egg producers, averaging about 125 eggs in a year.

They can be raised profitably without any water to swim in, needing only enough to drink. Ducks, the same as geese, are not subject to the many diseases that hens are heir to. It is not known that they ever had such diseases as cholera, roup, gapes and the like. The Pekin ducks have a heavy growth of feathers of high quality. The ducklings are easily raised and grow so fast that at ten weeks of age they weigh 5 to 6 pounds each. With their creamy white plumage, orange colored legs, yellow bills, their large sized broad bodies, a flock of them presents a pretty sight.

Clarington, Ohio—The pen of Pekin ducks that I got from you last fall were prize winners at the fair. They are the finest Pekin ducks that were ever shipped to this part of the country.

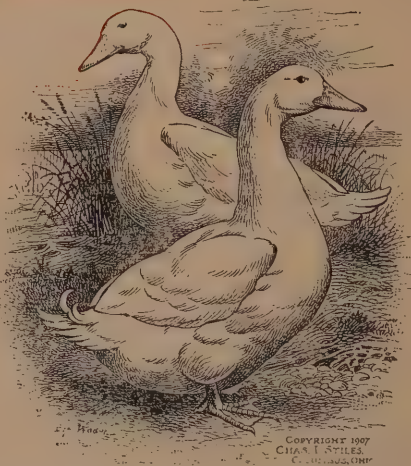

CARL L. ZESIGER.

St. Francisville, La.—I received my White Muscovy drake all O. K. He sure is a fine fellow. I am very much pleased with him so I thank you very much for sending such a fine drake.

Glen Easton, W. Va.—I received the pair of ducks. They are fine, much nicer than I had expected.

MRS. W. A. HAMILTON.

C. H. GARRISON.

Pearl Guineas

A very beautiful and popular variety of fowl, becoming more popular each year on account of their many good qualities. The guineas are prolific layers, easily raised.

White Guineas

If you are troubled with hawks, try a pair of guineas. The white variety are very ornamental on account of their pure white plumage.

← ROUEN DUCKS

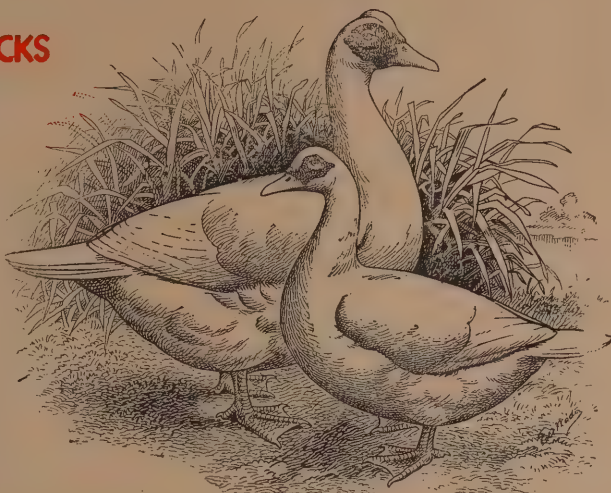

The Rouen ducks are considered one of the hardest of the duck family. They have the most beautiful colored and marked plumage of any breed of ducks. A flock of Rouen ducks is indeed a beautiful sight. They are about the size of the Pekin, are very hardy and splendid layers. Ducklings grow very fast and are full fledged at about twenty weeks. This year we are especially strong in Rouen Ducks. We have a very large flock of extra fine, large birds and you will be well pleased if you send us your order.

BUFF ORPINGTON DUCKS

A new and very beautiful and profitable breed. They are about the same size as the Pekin; are great egg producers and fine for market and table use.

WHITE MUSCOVY DUCKS

The White Muscovy are one of the most prolific of all the varieties of ducks. They are exceptionally large size, but it takes longer for them to mature than it does the Pekins. However, they can be raised on about one-half of the feed that the other varieties of ducks require. The Muscovy is found wild in South Africa. They are very quiet, and scarcely make any noise. The male is fully one-third larger than the female. It requires five weeks for the Muscovy eggs to hatch. Those wishing an ornamental as well as one of the most profitable of ducks, will find the Muscovy entirely satisfactory. We have an exceptionally fine flock of this variety.

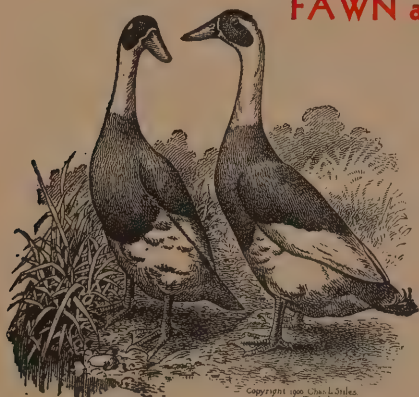

COLORED MUSCOVY DUCKS

Are the same as the White except the color which is white and a rich lustrous greenish black. Stock of this variety is very fine and will surely please.

For Prices on Fowls and Eggs of Ducks see Enclosed Colored Price List.

FAWN and WHITE INDIAN RUNNER DUCKS

Indian Runner Ducks came from India and are the greatest egg producing ducks. They grow quickly and are extremely vigorous and hardy. They are dry land fowls and do not need running water, a pond, or lake to thrive and do well. All that is necessary is a sufficient amount of clean drinking water. You should obtain a start from our heavy egg producing strain of Indian Runner ducks. We are sure that you will like them and that they will make you some big profits. Can also furnish the pure White Indian Runner Ducks.

WHITE INDIAN RUNNER DUCKS

Are in every way like their cousins—the fawn and white—except color of plumage which is pure white. Owing to their beautiful white plumage, yellow legs and bills and stately carriage, a flock of them present a very pretty sight.

Neubert's Louse Ointment

This Louse Ointment has met with tremendous success everywhere, and is a most valuable article for lice on hens, chicks, turkeys, ducks and geese, also lice on calves. Neubert's Louse Ointment has stood the test for the past 20 years. Finest thing ever known for head lice on baby chicks and small turkeys. We are anxious to have every poultry raiser give Neubert's Louse Ointment a trial this year, then you can judge for yourself, using it according to simple instructions and after 2 or 3 weeks examine your hens again and if you are not entirely satisfied with results return the empty box to us. We will promptly refund your money, no questions asked. That's fair enough isn't it?

Buxton, N. D.—I sent for a box of Louse Ointment last year to use for my chicks and turkeys, and it sure was wonderful.

C. J. SODERBERG.

Large box, \$1.00; 2 boxes, \$1.75; 4 boxes, \$3.00, Postpaid.

Brocket, N. Dak.—The Louse Ointment is the best I ever used for poultry lice. Will not be without it.

MRS. JOE E. KUBAT.

Richmond, Ky.—I have never found anything equal to your Louse Ointment. It certainly is great. I wouldn't be without it.

MRS. CHAS. TODD.

Roscoe, S. Dak.—Was well pleased with the results of your Louse Ointment.

MRS. EDNA KILBER.

This Punch can be used on fowls of any age. The leverage provided in this device for marking poultry enables one to punch with perfect ease any kind or number of webs. This punch is self-opening. Will not bruise the foot. They are well made of steel, nickel plated, handsomely finished and carefully tested.

Price: 25 cents, postpaid.

SPIRALET COLORED CELLULOID LEGBANDS

Are very popular, easy to put on and take off, sure to stay. Can furnish in red, blue, yellow or green. Will not fade. No. 9 for small fowls, as Leghorns, etc.; No. 11 for medium large as Plymouth Rocks; No. 12 for extra large, as Brahmas. Reduced prices. 50, 50c; 100, 80c; 200, \$1.50, postpaid. State size wanted.

INCUBATOR REPAIRS

Tested Incubator Thermometer 75c; Brooder Thermometer 50c. Wafer thermostat 75c (specify screw or stub stem.) Complete set of automatic regulator fixtures \$2.50. Sun-hinge burner No. 2, 75c; No. 3, \$1.00; double wick No. 33, \$1.25. Lamp chimneys No. 2 or No. 3, 60c. Lamp wicks No. 2 or No. 3, 10c. Direction sheet 10c. All above articles will be sent by mail, postpaid. We can furnish all other parts of different lamps, regulators, or any part of incubator or brooder. If possible, mail old part or describe fully.

Quality Chicks

THE TEST OF TIME . . .

The survival and steady growth of any business establishment from year to year depends entirely on the merits of its products, and the way the customers are treated. Ever since our business was established in 1893, our constant aim has been to satisfy and make a permanent friend of every customer. How well we have succeeded in this is demonstrated by the rapid growth of our business, and the splendid reputation we now enjoy with the American Poultry raisers.

TESTIMONIALS

Owing to the limited space we can give only a few of the many thousands we received. When letters, like the few herein published, are received entirely unsolicited from customers in every part of our land, we cannot but feel gratified. It is certainly evidence that our efforts to deal liberally and justly with all are appreciated.

Omaha, Nebr.—Chicks arrived in perfect health, in good condition and not a weakling was among them. No disease cropped out later, indicating good healthy breeding stock and clean hatching conditions are being maintained in your place of business. If this is a fair sample of your stock, you may expect me to order again, and tell all my friends where they may expect to get satisfactory poultry orders filled.

CLARK A. BROTHERS.

Chisago City, Minn.—My chicks came in fine shape. There were 508 living chicks and at this writing I still have 500. Your chicks are strong, there is no question about that. They are indeed quality chicks. My loss going on the fourth week now is only about 1½ per cent. That is the best I have ever seen. Thank you for sending me such quality chicks.

EMIL W. JOHNSON.

Wakefield, Mich.—We received our chicks and we were pleased so much. The chicks were all alive and so full of pep and they still are now after one week of being here.

UNO HILL.

Lebanon, Tenn.—I never saw as fine a bunch of chickens in my life, not a single small or droopy baby in the 100. I appreciate more than you will ever know. Thanks so much for every promptness, quality and honesty.

MRS. SALLIE M. JONES.

Shelbyville, Texas—I received my chicks, 25 Silver Laced Wyandottes and 25 White Giants and was well pleased. They arrived husky and fine, all alive and I could not be better pleased.

MRS. M. C. FULTS.

Salem, S. C.—The chicks arrived March 22nd in good condition. All alive and are doing fine. They sure are big, fine little fellows.

ALEX. M. ROGERS.

Missoula, Mont.—I received the chicks (26) in fine condition. I must say they are the healthiest chicks I ever had. We have had an awful winter and I was a little afraid I had sent for them too soon but they were all alive. I can't say too much about the baby chicks. I sure am pleased with them. Neubert's chicks for me hereafter.

MISS NELLIE L. SWARTZ.

Brenham, Texas—We received the cockerel in fine condition and I am well pleased with him. He is sure lively and we all like him. Thanks very much for selection.

HERBERT ZWAHR.

Hawley, Pa.—Received chicks and was well pleased with them. They were very nice and all living.

CORNELIUS C. PERRY.

Pine River, Minn.—I received my baby chicks and all were alive and real nice. Am real well pleased with them.

MRS. M. H. HEMMELMAN.

Clearbrook, Minn.—Received the chicks OK and they sure are a very fine, strong bunch of chicks.

PHIL GRAVELLE.

Smith Grove, Ky.—Received chicks all alive and many thanks. Well pleased. Wishing you good luck in your work. You may look forward for orders in the future.

L. D. DOSSEY.

Rarden, Ohio—I received my baby chicks all alive. Sure was fine and healthy chicks. They are doing fine and are growing nicely.

SANFORD TAYLOR.

Libby, Mont.—I received the White Rock rooster in fine shape and how well pleased we are with him. Every one that has seen him says he sure is a beauty. Thanks a lot.

MRS. GRACE M. BARR.
